

Science Digest: A quarterly science bulletin

A Message from the Chief Science Officer

I am thrilled to share that Autism Speaks recently awarded more than \$4.7 million in grants to 26 autism researchers at premier academic and research institutions.

These projects include a range of basic and applied science topics, including dedicated funding of \$2.6 million to transition to adulthood, one of the biggest challenges facing people with autism and their families. This investment is critical to accomplishing our mission to deliver solutions that will enhance people's lives and enable more people to have more meaningful days. [Read more](#) about these funded projects and the researchers behind them.

We are also working on other ways to get research findings into the hands of health providers and families. Through our [Autism Treatment Network and ECHO Autism Primary Care](#), community providers are learning from specialists how to handle medical care and other concerns for autistic children. By learning best practices in screening for autism and helping reduce the wait for care, this program is helping children and families in their own communities.

Just last week, we also hosted a [Thought Leadership Summit on Transition to Adulthood](#) in Washington, D.C. Gatherings like these, where researchers, policy experts, advocates and self-advocates share ideas about what the future of transition research and systemic solutions should look like, will be critical to informing how we help people with autism across the lifespan.

Next month, we are excited to introduce you to our Science Spotlights, a series of

short videos that offer practical answers to common questions about autism science. Find the Science Spotlights on our [YouTube channel!](#)

We welcome your feedback on our quarterly science bulletin and our research program. Email us at research@autismspeaks.org.

Sincerely,

Thomas Frazier

Thought Leadership Summit on Transition to Adulthood

Joined by researchers, policy experts, family members and self-advocates, Autism Speaks hosted a Thought Leadership Summit on Transition to Adulthood on Oct. 2-3 in Washington, D.C. The two-day meeting featured facilitated discussions around employment, education, access to needed services including healthcare, transportation and housing for teens and adults with autism. [Read more.](#)

Is autism being overdiagnosed?

Despite claims by a recent research study that autism is being overdiagnosed, experts at Autism Speaks said that conclusion overstates what the study can realistically draw from its analysis. The study published last week in [JAMA Psychiatry](#) concluded that changes in how providers diagnose autism are blurring the line between people with autism and the general population. [Read more.](#)

Large family-based study finds 80 percent of autism risk due to inherited genes

A new study looking at autism in five countries found that 80 percent of autism risk can be traced to inherited genes rather than environmental factors and random mutations. The study, published July 18 in [JAMA Psychiatry](#), analyzed data of nearly 2 million people across Denmark, Finland, Sweden, Israel and Western Australia. It is the largest family-based genetic autism study to date, including children with autism, their siblings and cousins, as well as parents and their siblings. [Read more.](#)

Upcoming and archived webcasts, webinars and meetings of interest

Advances in Autism Research & Care is a free monthly webinar series sponsored by the [Autism Speaks Autism Treatment Network](#) in its role as the [Autism Intervention Research Network on Physical Health](#). Join us for the upcoming October webinar:

Modeling Screening and Diagnosis: Featuring panelists Sarabeth Broder-Fingert, MD, assistant professor of pediatrics at Boston University School of Medicine, and Christopher Radley Sheldrik, PhD, research associate professor of health law, policy and management at Boston University School of Public Health. **Oct. 24, 2019, at 1 p.m. EST. Register [here](#).**
